

# TRACK. CAPTURE. DELIVER.

## SECURE, HOSTED CLOUD SERVICE

The OEM Data Pipeline is a data services platform designed to collect and provide device data to partners and customers of OEM Controls, Inc. Device data is submitted and obtained via REST API.

The Data Pipeline provides programmatic access via REST web services for data collected from OEM Data Delivery Bluetooth products.

We work with IT professionals, developers, and data base administrators to determine the best method of data integration. We will customize the hardware devices as well as the data feed to fit your needs

### Specifications:

DD Product.	DataPipeline Web Service
